

# ShowShouts

## Project 1 Documentation

**Developed By:** Adam Gemperline

**Repository URL:** <https://github.com/gemperline/ShowShouts>

### Tools, Languages, and Libraries:

IDE: Visual Studio Code

Front-End: HTML, CSS, JavaScript, Bootstrap, 'Start-Bootstrap' page template

Back-end: XAMPP stack, PHP, MySQL w/phpmyadmin, JavaScript, jQuery

### Overview:

This application serves as a website for members to view live music events from the recent past and give them a rating. Users are met by simple login and registration pages. Successful login and registration actions will forward the user to main site page. The main site page contains a list of past live events that user can rate. Users can also create events to be rated, send the site administrators a message, and get event information.

### Installing and Implementing:

- Download or clone the repository at:
  - <https://github.com/gemperline/ShowShouts>
- Download XAMPP (if not installed on local machine):
  - <https://www.apachefriends.org/download.html>
- Place the 'Project1' folder from the downloaded repository into the 'htdocs' folder located in the XAMPP folder on your machine.
- In the XAMPP folder, run 'xampp-control.exe'
- Click start buttons for the Apache server and MySQL server, PIDs and Port numbers should display for both servers.
- Click 'Admin' button for Apache server, the index.php page should launch in your default browser
